### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ben Hauptman on 6/27/06.

The application has been amended as follows:

In claim 1, line 21, --of-- has been added between "plurality" and "slits", and in line 32, --to form said first, second, and third elastics zones-- has been added after "length".

Claim 5 has been cancelled.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or fairly suggest a method of making a garment by forming slits in the machine direction in a continuous web arranged symmetrically in the cross-section of the web, folding the portion outside the middle portion of the web in the cross-direction orthogonal to the machine direction so that the folded portion is overlapped with the middle portion, and joining the folded portions together so that zones of varying elasticity are formed, with a first elastic zone in the crotch region, a second elastic zone extending from the first zone and parallel to the peripheries of the leg-openings of the garment to the front and rear waist regions, and a third elastic zone for the remainder

wherein the stretch stress decreases from the first to the second to the third zone. While Sugito et al.(U.S. Publication 2004/0153043A1) shows the three zones of stress, there is no suggestion these are made by folding a portion of the web on itself. While Ryan(U.S. Patent 3,794,033) suggests forming symmetrical slits and joining the folded region, effectively forming three zones, the second zone does not extend parallel to the leg openings to the front and rear waist regions. Additionally, the reference makes no suggestion as to the stretch stress but uses the folding to include more absorbent material in the crotch region so there would be no reason to extend the folded region to the front waist. While Fridolph(U.S. Patent 2,122,417) shows slitting and folding, the folded material does not extend parallel to the leg openings to the front and rear waist openings(Figures 6 and 9), i.e. following the contour of the leg openings.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
